=====

## PROJECT OBJECTIVE

=====

Create a complete restaurant website with an Admin Dashboard.

### Customer Website:

- View restaurant information
- Browse complete menu
- Search menu
- Filter menu categories
- View food images
- Order through WhatsApp
- Call restaurant
- View location
- Scan QR menu

### Admin Dashboard:

- Manage everything from one place
- Update content dynamically
- Changes instantly reflect on customer website

No online payments.

No shopping cart.

No checkout system.

Order flow:

- Customer Opens Website
- Browses Menu
- Clicks Order on WhatsApp
- WhatsApp Opens With Dish Details
- Customer Sends Message
- Restaurant Confirms Order

=====

TECH STACK

=====

Frontend:

React.js

Styling:

Tailwind CSS

Icons:

Lucide React

Animations:

Framer Motion

Backend:

Node.js

Express.js

Database:

Supabase PostgreSQL

Authentication:

Supabase Auth

Image Storage:

Supabase Storage

Realtime Updates:

Supabase Realtime

Deployment:

Frontend → Vercel

Backend → Render

=====

AUTHENTICATION SYSTEM

=====

Create secure Admin Authentication.

Admin Login Page:

Username

Password

Login Button

Forgot Password

Session Management

Protected Routes

Logout Function

Only authenticated admins can access dashboard.

Unauthenticated users should be redirected to Login.

=====

ADMIN DASHBOARD

=====

Create a modern dashboard.

Sidebar Menu:

Dashboard

Menu Management

Popular Dishes

Restaurant Information

Gallery Management

Contact Information

QR Code Management

Hero Section Management

Customer Reviews

Website Settings

Admin Users

Logout

=====

DASHBOARD OVERVIEW

=====

Show:

Total Menu Items

Total Categories

Popular Dishes Count

Gallery Images Count

Phone Numbers

Website Status

Recent Updates

=====

MENU MANAGEMENT

=====

Admin should be able to:

Add Menu Item

Edit Menu Item

Delete Menu Item

Hide Menu Item

Show Menu Item

Update Prices

Update Categories

Update Food Images

Search Items

Filter Categories

Fields:

Dish Name

Price

Category

Description

Image URL

Status

Popular Item

Display Order

Changes must instantly update customer website.

=====

## DATABASE REQUIREMENT

=====

Create tables:

admins

restaurant\_settings

menu\_categories

menu\_items

popular\_dishes

gallery\_images

reviews

contact\_information

hero\_section

qr\_codes

website\_settings

=====

## FINAL REQUIREMENT

=====

The system must function like a professional restaurant management platform where every piece of content shown on the customer website is controlled through the Admin Dashboard.

Any change made by admin must instantly update across all open tabs, devices, and customer sessions in real time without requiring a page refresh.

Build with clean architecture, scalable database design, responsive UI, secure authentication, and production-ready deployment.
